

## FARO LS SDK REPAIR

Faro laser scan data is support using the Faro LS SDK. If the interface is not working, use the following steps to diagnose and repair.

Open the Apps & Features and look for the Faro LS installation and version number. In this case we have installed the 7.0.2.5 version.

If Faro LS SDK is not installed on your computer, visit the [Faro Technical Support](#) web site and create an account. Then download and install the latest available version.

### Faro LS is installed but it's not working.

From the start menu open a Windows Power Shell. In the PowerShell Window move to the Faro LS SDK install directory using the following command:

```
cd C:\Windows\WinSxS\amd64_faro.ls_1d23f5635ba800ab_1.1.700.2_none_3592ac13356a05e1\
```

Now manually register the dll using the following commands:

```
regsvr32 .\iqopen.dll
```

Restart Bloom Cloud Engine and import a .Isproj or .fls file using Drag & Drop or File Import method.
